## EARTHWORM INVESTIGATION

<b>Ask a Question</b> 	Do earthworms like light? 
<b>Make a Hypothesis</b>  (what you think)	If I shine a flashlight on my worm, <u>then</u> I think the worm will:  stay in the light <u>move out of the light</u> <u>Because worms live under ground (dark)</u>
<b>Do an Experiment</b> 	1. Lay your worm in the middle of a paper plate. 2. Shine the flashlight directly on your worm. Do not move the flashlight or follow the worm with the light. Keep it in one spot. 3. Observe your worm's behavior. <u>try it</u>
<b>Record your results</b>  (what happened in your experiment)	My worm moved its body away from the light slowly.
<b>Draw a Conclusion</b> (what you learned) 	Worms (do, do not) like light. <u>Worms do not</u> like light

Was your hypothesis right?

Yes

No
